**STACK TRACE**  
 The Stack Trace page lists the JVM stack depth for the methods that have not completed execution. The trace provides the Class Name and Method Names for each level of the stack. The stack trace feature is not available if you are using a version of WebSphere earlier than 4.0.3.

Depth	18	Class	com/ibm/servlet/engine/invocation/CachedInvocation	Method	handleInvocation
Depth	19	Class	com/ibm/servlet/engine/srp/ServletRequestProcessor	Method	dispatchByURI
Depth	20	Class	com/ibm/servlet/engine/oselister/OSEListenerDispatcher	Method	service

**FIGURE 5.** Stack Trace

**Usage Notes:** The Stack Trace shows the outstanding methods to be completed as a result of the request. This trace reports the data unfiltered so you will see every class. In a normal environment, a request executes quickly so it may be difficult to catch a stack trace before completion. This is meant for troubleshooting a hung request.
